01 PROFILE

Over the past 10 years I been working with web technologies like React, React Native, working also on backend stuff at some point with Python (Django, DRF), managing databases like PostgreSQL, caching system with Redis, Docker, Feature Flags, mobile apps with react native over the past 10 years, deploying white label apps to more than 100+ clients, using services like Expo EAS, deploying manually by building iOS and Android apps.

AI enthusiast with things like Gemini, Codex, ChatGPT, Cursor, Claude code, Open code, etc.

02 EMPLOYMENT HISTORY

Oct 2023 — Present
Los Angeles

Senior Mobile Engineer at Luxury Presence

I help LP to build their mobile app, in which we generate more than 100+ white label clients by supporting and maintaining a single code base.

I develop many features of the app from end to end. Helping the QA team to improve the performance of the most relevant screens of the app. Implement an AI feature where users can talk, and we write a note using AI, and the content of the note can also be improved by using AI.

I also help to develop the backend and frontend for the new CRM Dashboard that helps agents and clients to interact using a collaboration board where they can share properties, searches, etc.

My work here was not only mobile, but I'm also a flexible/eager person to learn new things, so I did work on the web, backend, and databases too.

Jan 2022 — Oct 2023
Villahermosa

Senior React Native at Rootstrap

Working at Rootstrap help me to growth in my personal career getting in touch with the RN community internally and externally making thunder talks, contributing to the RN Base that we use to start react native apps and helping our clients to build successful products like the Onward app that is used to help co-parents for tracking and share expenses for his kids and

A-dec+ service app that help to all the technicians from A-dec to research and request more accurate and fast parts for repair dental chairs for his clients.

Onward - USA

- Onward is an app to help co-parents to share his expenses and track everything that they want in an easy way.

Adec+ Service App - USA

- Mobile app to help technicians to search by text or image (image recognition) parts that need to be replaced for some medical dental chairs and they can request for that supplies.

Jan 2017 — Jul 2020

Villahermosa, Tabasco, MX

Developer at KondoSoft

At KondoSoft I acquired many skills for modern development both as Frontend and Backend, I led projects such as "GarageATA" and "InKind" both mobile applications created using React Native, being InKind for clients in the USA, I highlighted during my stay as a Trainee at KondoSoft what it gave me the door to start my career as a professional developer.

Applications in which I participate in KondoSoft:

EasyLight (App) - Tabasco

- mobile application to estimate a possible electricity consumption based on the reading of the meters of a home.

Panic Button (App, Dashboard Web) - Tabasco

- mobile application to issue alerts to a web dashboard used by the C4 of the city of Villahermosa to address such alerts in real time using Firebase.

Yum Delivery (App) - Tabasco

- Food delivery application for the purchase, delivery and monitoring of food, the 3 apps were developed for users, riders and businesses, as well as a web dashboard to manage all orders, restaurants, dishes, etc. using React and React Native.

RutEs MX (App) - CDMX

- Mobile application for monitoring school routes in CDMX, using Geolocation of school buses and parents can track the bus as well as receive notifications and see if their children go to school or come back home.

Letica (App) - Monterrey

- A native Android application was migrated for both platforms using React Native, where users can make anonymous complaints about different topics in the workplaces of the companies that are registered.

InKind, InKind Owners (App) - USA

- Mobile application for the purchase and customer service of multiple restaurants with branches in the USA, AUS and CAN, the redesign of the app for users and managers (restaurant managers) was optimized and applied.

Garage ATA (App, Web Dashboard)

- Mobile application for requesting appointments for inspection and vehicle services of

the Tabasco automotive agency, where users can track their vehicles as well as see their service history and see all the photos and videos related to their services.

Garage ATA (Backend)

- REST API connected to the tabasco automotive database from which the vehicle data is obtained as well as the customers, the service orders are created on its central system used and managed by the workers of said company, as well as A background service was generated to upload the photos and videos of the services to an S3 of Amazon Web Services.

Mar 2015 — Nov 2015

Villahermosa, Tabasco, MX

Developer Trainee at Creatur

In this company I gave my social service at the university where I had my first approach with HTML5, CSS3, Javascript, Python, Linux and Django, where I contributed and learned Frontend and Backend development for the invoice capture module.

May 2019 — Mar 2020

Buenos Aires, Argentina

Feria de Ropa at Juan Jose Mozon

I met Juan Jose Monzon through facebook in a group of React Native developers and I helped him develop a mobile application for selling clothes online.

Aug 2020 — Feb 2021

Colombia

Developer at Suazo

Applications in which I participated as a developer during my stay at Suazo:

Quick Balance (App) - Colombia

- mobile application to measure the foods to which you can perceive food sensitivity and cause discomfort, through a history of daily meals that the user can add together with the symptoms that he could feel after that meal.

Apr 2021 — May 2021

Guadalajara, México

Developer at Larva Studio

In this company I was a lead developer in an application with React Native + GraphQL, in which users have a personal coaching system plus audio therapies to control anxieties and stress.

The Happy Club (App) - Guadalajara, Mexico

- Using the most modern technologies, we update and add new features to the existing application, as well as improvements in the In App Purchase (IAP) module, as well as planning for a possible future implementation of software for video chat from the app.
